# HEAT PUMP SYSTEMS

**To the centenary of the birth of László Heller**

---

With 154 Figures and 24 Tables

Dunaharaszti

2009

# CONTENTS

Dedication	7
Preface	11
Introduction	13

## 1. HEAT PUMPING 15

1.1. Role of heat pumps	15
1.2. Terminology, keywords	16
1.3. History of heat pumps	20
1.4. Application of heat pumps, statistical data	21
1.5. Working principle of heat pumps	22
1.6. Compressors	25
1.7. Ground heat	26
1.8. Geological media as heat sources	30
1.9. Heat collectors	31
1.9.1. <i>The most important Hungarian prescriptions valid for heat pumps utilising subsoil or surface waters as heat source</i>	31
1.9.2. <i>Open heat collectors</i>	33
1.9.3. <i>Heat collectors of closed loop system</i>	34
1.10. Solar energy and heat pumps	39
1.10.1. <i>Solar energy and ground energy</i>	40
1.10.2. <i>Direct utilisation of solar energy by heat pumping</i>	43
1.11. Heat pump systems	48

## 2. THERMAL INSULATION 51

2.1. Buildings with low energy consumption	53
2.2. Passive houses	54
2.3. Basic principles of passive house design	54

## 3. STATE OF THE ART CENTRAL HEATINGS OPERATING WITH HOT WATER – HEAT SENSATION IN FOCUS 56

3.1. Thermal equilibrium	56
3.2. Low temperature heating and cooling systems	58
3.3. Building structures	60
3.4. Professional experience	61
3.5. Ventilation	62

## 4. DESIGN OF HEAT PUMP SYSTEMS 64

4.1. Energy-related calculation of buildings	65
4.2. Review of an existing or a newly built heating system from the point of view of applicability	66
4.3. Reconstruction of the traditional gas fuelled system	66
4.4. Design of the ground source heat pump system	67
4.5. Feasibility investigation of a heat pump based calorific centre	67
4.6. Determining of the heat extraction possibility	68
4.6.1. <i>New public local government buildings</i>	68
4.6.2. <i>Existing public and local government buildings</i>	70
4.7. Comparative calculations regarding energy and expected refund	71
4.8. Further questions of decision preparation	72

## **5. A CASE STUDY IN HUNGARY, EXAMPLES 75**

- 5.1. A case study 76
- 5.2. Examples of reconstructions and investments 76

## **6. ENVIRONMENTAL AND SOCIAL UTILITY 80**

- 6.1. Health based demand for reducing air pollution 80
- 6.2. Heat pumps and climatic changes 80
- 6.3. Carbon dioxide emission in case of different power plant structures and fuels 85
- 6.4. Business, cost-effectiveness and tender participation considerations with respect to heat supply of public facilities 89

## **ANNEXES 97**

- A1.** Evaluation of the efficiency of heat pumping through centuries 99
- A2.** How to calculate the theoretical limits of the efficiency of heat pumping? 103
- A3.** Comparison of heat pump systems with traditional natural gas fuelled systems from energy-related point of view 106
- A4.** New developments, “people’s heat pumps” 107
- A5.** Example of preliminary calculations of a ground source heat pump system from one of the proposals for the governmental district in Budapest 109
  - A5.1. Initial data given 109
  - A5.2. The technical content of the proposed system 109
  - A5.3. Energy calculations 110
  - A5.4. Dimensioning the heat pump system 111
  - A5.5. The proposed heat pump system 118
  - A5.6. Main data of the proposal 122
  - A5.7. Technical specification of the proposal 123
  - A5.8. Measurement of thermal conduction of soil 124
- A6.** Related publications 127
  - A6.1. Dr. Gergely Büki: Efficiency of the Utilisation of Soil Heat 129
  - A6.2. Ferenc Komlós: Geothermy, a Trump Card that hasn’t been Played yet – for the Centenary of the Birth of László Heller 139
  - A6.3. Ferenc Komlós: Heller Programme, Utilisation of Renewable Energy Sources with Heat Pumps 142
- A7.** Hungarian national standards 148
- A8.** Energy extracted from renewable sources and heat pumping – selections and reflections 153
- A9.** Presentation of authors 161
- A10.** Sponsors of this book 166
